

PRANEETH KALANGI

San Jose, CA | +1 408-210-9921 | kalangipraneeth@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

San José State University

Master of Science in Software Engineering, Data Science

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science Engineering

San Jose, CA

Aug 2026 – Present

Chennai, India

May 2022 | GPA: 3.65/4.0

PROFESSIONAL EXPERIENCE

Software Engineer 3 (Full-Stack Developer)

April 2024 – August 2026

Optum Global Solutions (India) Pvt. Ltd.

Bangalore, India

- Built an **LLM-powered Agentic AI code-review and remediation system** with GitHub Actions, GitHub Copilot, and Claude to automatically review PRs, flag missing test coverage, and post actionable feedback; integrated Dependabot to detect and fix vulnerable dependencies, **cutting review time 40% and increasing pre-merge bug detection 20%**.
- Led end-to-end **Angular 9-to-18 modernization using AI-assisted architecture and migration planning**; retired the legacy repository and rebuilt the application with lazy loading, NgRx Store/Signals following Redux patterns, IndexedDB persistence, and Husky linting and automated pre-push test gates, achieving **80% SonarQube compliance and 40% higher application efficiency** with proper algorithms.
- Architected and deployed **reactive Java Spring Boot microservices** with WebFlux, Project Reactor, and R2DBC for high-performance non-blocking I/O; achieved **95% unit test coverage and 25% lower code complexity**; added Resilience4j circuit breakers/retries for fault tolerance, Kafka event streaming, and Grafana real-time observability.
- Led migration of services from **on-premises infrastructure to Azure**, using Docker containerization and AKS orchestration for **zero-downtime deployments**; built automated Azure DevOps CI/CD pipelines and provisioned supporting infrastructure including Azure Container Registry, Storage Accounts, and Azure Database for MySQL.
- Mentored 15+ engineers and contractors** through daily code reviews, strengthening reactive-programming and testing practices; served as primary technical lead during production incidents, using **AI-assisted log analysis** and real-time Grafana monitoring to accelerate root-cause diagnosis, improve system observability, and reduce downtime.

Software Engineer 2 (Full-Stack Developer)

May 2022 – April 2024

Optum Global Solutions (India) Pvt. Ltd.

Bangalore, India

- Improved application response time by 40%** by redesigning how configuration data was retrieved and aggregated across provider dashboards, using Redis caching and optimized Java data-processing logic—reducing retrieval latency while directly enhancing dashboard responsiveness, UI personalization, and the overall provider user experience.
- Led **CI/CD migration from Jenkins to GitHub Actions**, modernizing the deployment pipeline and reducing manual release steps to enable faster, more reliable feature delivery across teams.
- Led a major code-quality initiative resolving **100+ critical technical-debt issues** across the codebase, reducing production defects and improving the long-term maintainability of enterprise applications following Data structures

PROJECTS

Omnichannel Demand Dynamics Engine | Python, Pandas, Scikit-Learn, Time-Series Analysis, Streamlit 2026

- Built and deployed an end-to-end **machine-learning pipeline** with XGBoost and Random Forest, forecasting inventory needs with **90%+ accuracy** from custom-engineered retail features; delivered a containerized Streamlit dashboard that translated forecasts into data-driven inventory planning and automated retail reorder decisions.

InclusiveCI – Enterprise Accessibility Regression Platform | Java 21, Spring Boot, Spring Modulith, React, 2026

TypeScript, PostgreSQL, Keycloak, GitHub Actions, Playwright, axe-core, Docker

- Built a **change-aware accessibility quality gate** comparing exact GitHub PR base and head revisions using Playwright and axe-core; classified findings as new, existing, resolved, or uncertain and published explainable pass/fail results through GitHub Actions and the Checks API.
- Engineered a **Spring Boot modular-monolith control plane** with **OpenAPI 3.1**, PostgreSQL/Flyway, Keycloak **OIDC/RBAC**, **HMAC-verified webhooks**, **idempotent inbox/outbox processing**, retry/backoff handling, audit trails, Docker packaging, and automated unit, integration, contract, and end-to-end tests.

TECHNICAL SKILLS

Generative AI & ML: Large Language Models (LLMs), Agentic AI Workflows, Machine Learning, GitHub

Copilot, Claude, AI-Assisted Development, Prompt Engineering, Scikit-Learn, XGBoost, Random Forest, PyTorch, TensorFlow, Pandas, NumPy, Time-Series Forecasting, mathematical modeling, SAS and Matlab, Data mining, Big data processing, filtering, and presentation, Statistical methodology and tool development

Languages: C, Python, Java, TypeScript, JavaScript, SQL, C++, HTML/CSS

Backend & Distributed Systems: .NET, Spring Boot, WebFlux, Project Reactor, R2DBC, Apache Kafka, Redis, Resilience4j, Netty, Apache Camel, REST APIs, Microservices, PostgreSQL, MySQL

Frontend & Testing: Angular, NgRx, React, Next.js, Node.js, Playwright, Cypress, Postman, Figma, Product design

Cloud, DevOps & Practices: AWS (EC2, S3, Lambda, DynamoDB, VPC), Microsoft Azure (AKS, ACR, App Service, Storage, Azure Database for MySQL), Docker, Kubernetes, GitHub Actions, Azure DevOps, Jenkins, CI/CD, Grafana,
